## How to hang a Timber Gate

### Measuring for a timber gate

When measuring for a gate remember to add the two post sizes to the gate size and a further 20mm overall spacing to allow the gate to freely open and close.

Free standing posts for 6' gates should be at least 100 x 100mm (4" x 4"). Supported posts, either with a top cross member or at the sides, may be smaller. If using a top cross member, it should be at least 2m (6' 6") off ground level.

The hole size for each post should be 600mm deep and 300mm wide. Concrete in the posts with MetCrete or a similar post fix concrete.

Posts may also be fixed to an existing wall.

Ensure the posts are vertically parallel before attempting to fit the gate.

### Fitting the gate

Position the gate between the posts and place some 50mm spacers under it. Allow for any unevenness in the ground when the gate is opened.

Now place wedges either side of the gate to even out the gaps either side and to hold the gate in place while fitting the hinges (3).

Fit the hinges, taking care to ensure that the gate opens as intended. Remove all spacers and wedges and check that the gate swings freely.

Fit the latch to the gate at the preferred height and in a position where the gate can support the screws. Fit the latch to the post.

Finally, fit a gate stop to the frame/post to protect the hinges and latch from damage.

### Fixing trellis to a fence

Trellis has many uses in a garden. It can provide a framework for climbing plants, conceal unsightly areas or act as a division between garden areas. It may also be used to add height to an existing fence – either as a decorative feature or to provide more privacy.

- It will be necessary to extend the existing posts to add the trellis. Use Metpost Post Extenders and a piece of extra post to gain the required height.
- Fix the trellis to the extended post with Metpost Metclips or screws.
- Use a Grange Post Cap to the top of the post to add a decorative finish and protect the top of the post.

## TIMBER FSC®

The FSC® logo identifies products which contain wood from well managed forests certified in accordance with the rules of the Forest Stewardship Council® FSC®. All our products are FSC® certified unless otherwise stated.

Look for FSC® certified products

### Understanding characteristics of timber

It must be remembered that timber is a natural product and will be subject to movement and weathering as it seasons. It is not uncommon for small splits to occur (called shakes) in timber when drying, and for warping when timber is allowed to dry too rapidly. These will normally go back when humidity rises. This is nature at work and should not be considered as a fault. **Acceptable limits are defined in the relevant British Standards.** For further information on characteristics on timber, visit our website [www.grangefencing.co.uk](http://www.grangefencing.co.uk).

### Pressure treatment disclaimer

We are committed to using a pressure treatment method across our full range of timber products to provide a superior approach to wood preservation and eliminate the need for costly and time-consuming maintenance. Should the pressure treated wood be cut, drilled or notched, we recommend that a cut end treatment be applied to ensure the effectiveness of the treatment. Paints, wood stains and water repellent can be applied however we recommend you closely follow the manufacturer's instructions.
